NOTE

Condizioni di vendita

PULIZIA DELLE SUPERFICI CROMATE

La finitura più diffusa, ottenuta tramite processo galvanico, è quella cromata: caratterizzata da superfici brillanti e lucenti.

Le finiture galvaniche quali cromo e nickel sono ottenute tramite un processo industriale di elettro-deposizione.

Si raccomanda di asciugare costantemente il rubinetto con un panno morbido e non abrasivo, evitando depositi di calcare esteticamente sgradevoli.

Nel caso in cui si riscontrassero depositi di calcare sulle superfici del prodotto, è possibile dissolverla con aceto diluito e successivamente risciacquare con abbondante acqua.

Non utilizzare detergenti e spugne abrasive, acidi, solventi o candeggina.

PULIZIA DELLE SUPERFICI CON VERNICIATURA A POLVERE

Le finiture con rivestimento a polvere sono ottenute con un procedimento a secco, chiamato deposizione elettrostatica a spruzzo, in cui la polvere fine viene applicata con una pistola sulla base metallica, a temperature elevate in forni appositi.

La rubinetteria verniciata a polvere: bianco opaco, nero opaco e varie, oltre a dare una consistenza piacevole al tatto, riduce il rischio di graffi, abrasioni, scheggiature e altri segni di usura.

Lo sporco e le macchie derivanti da depositi di sapone o dentifricio devono essere rimossi lavando le superfici solo con acqua e detergenti a Ph neutro, con l'aiuto di un panno morbido e non abrasivo.

Le parti verniciate non devono essere pulite con prodotti chimici contenenti alcool.

PULIZIA DELLE SUPERFICI IN FINITURA ORO

Le finiture dorate di GATTONI Rubinetteria sono create con placcatura in oro 24kt, su una superficie di ottone nichelato.

Finiture estremamente preziose e delicate quali: oro giallo e oro rosa, lucidi e spazzolati richiedono cure e attenzioni speciali.

Per mantenere pulito il rubinetto è sufficiente asciugare le superfici con un panno asciutto e morbido, non abrasivo, al termine di ogni utilizzo.

UNA MAGGIORE CURA DEL PRODOTTO GARANTISCE ALLA FINITURA DI MANTENERE IL SUO ASPETTO ORIGINALE PIÙ A LUNGO

CLEANING OF CHROME SURFACES

The most common finish, obtained through a galvanic process, is the chromed one: characterized by bright and shiny surfaces.

Galvanic finishes such as chrome and nickel are obtained through an industrial electro-deposition process.

It is recommended to constantly dry the tap with a soft and non-abrasive cloth, avoiding aesthetically unpleasant limestone deposits. If limestone deposits are found on the product surfaces, it can be dissolved with diluted vinegar and then rinsed with plenty of water.

Do not use abrasive cleaners and sponges, acids, solvents or bleach.

CLEANING OF SURFACES WITH POWDER COATING

The powder-coated finishes are obtained with a dry process, called electrostatic spray deposition, in which the fine powder is applied with a gun on the metal base, at high temperatures in special ovens.

The powder-coated faucets: matt white, matt black and various, in addition to giving a pleasant texture to the touch, reduce the risk of scratches, abrasions, chips and other signs of exploitation.

Dirt and stains resulting from soap or toothpaste deposits must be removed by washing the surfaces only with water and neutral pH detergents, with the help of a soft, non-abrasive cloth.

Painted parts must not be cleaned with chemical products containing alcohol.

CLEANING OF SURFACES IN GOLD FINISH

The golden finishes of GATTONI Rubinetteria are created with 24kt gold plating, on a nickel-plated brass surface.

Extremely precious and delicate finishes such as: yellow gold and rose gold, polished and brushed require special care and attention.

To keep the tap clean, simply dry the surfaces with a dry and soft, non-abrasive cloth after each use.

GREATER CARE OF THE PRODUCT GUARANTEES THE FINISH TO MAINTAIN ITS ORIGINAL APPEARANCE FOR LONGER

GATTONI RUBINETTERIA E L'INNOVAZIONE SOSTENIBILE

Innovare significa sfruttare le conoscenze e la tecnologia per produrre in modo sempre più sicuro ed eco-compatibile. Ecco perché Gattoni Rubinetteria ha adottato da qualche anno linee di condotta a tutela della salute, della sicurezza e dell'ambiente per essere già oggi - e continuare ad essere nel futuro - sempre più preparata, innovativa, all'avanguardia.

GATTONI RUBINETTERIA AND SUSTAINABLE INNOVATION

To innovate means to take advantage of know-how and technology to achieve a safer and more environment-friendly production process. That is why Gattoni Rubinetteria has for quite some time adopted a manufacturing policy aimed at guaranteeing a safe and healthy environment and be already now and continue to be in the future, a technologically advanced and innovative company always in the forefront.

ENERGIA FOTOVOLTAICA PER MUOVERE L'AZIENDA

L'80% del fabbisogno totale di energia dell'azienda è coperto da un impianto fotovoltaico all'avanguardia di potenza pari a 197,34 kW: tutti i macchinari produttivi e l'illuminazione dell'azienda sono mossi da energia autoprodotta, con conseguente drastica riduzione dei costi a fronte di una bassissima emissione di CO₂ nell'atmosfera. L'impianto, di ultima generazione, si estende su un superficie di 1.400 m² ed è composto da 880 moduli e da 7 inverter: la corrente continua prodotta si trasforma attraverso questi ultimi in corrente alternata, necessaria a far funzionare l'intero ciclo produttivo dell'azienda. La sua produzione annua è di circa 209.000 kW di energia pari ad una riduzione di emissioni di CO₂ in atmosfera di 150 tonnellate.

PHOTOVOLTAIC ENERGY FOR THE ENTIRE PRODUCTION PROCESS

80% of the company's total energy need is satisfied by a highly advanced 197.34 KW photovoltaic system: all production machinery as well as the entire lighting system are fed by internally produced energy with a drastic reduction of costs and very low emission of CO₂ in the atmosphere. The ultimate generation system extends over a 1.400 sq.m. surface and is composed of 880 modules and 7 inverters, which turn the continuous current produced by the system into the alternate current necessary to activate the company's entire production cycle. The system produces annually about 209,000 kW of energy equal to 150 tons of CO₂ released into the atmosphere.

CICLO PRODUTTIVO A BASSO IMPATTO AMBIENTALE

Ogni fase del processo produttivo è costantemente monitorato ed oggetto di continue migliorie. In particolare la fase della cromatura in bagno galvanico avviene secondo un sistema - denominato PWP (Pure Water Process) - che inibisce il rilascio nelle acque potabili di metalli tossici attraverso due trattamenti: il primo garantisce l'eliminazione chimica del piombo, il secondo è rappresentato da un deposito di nichel elettrolitico estremamente resistente alla corrosione, cui si aggiungono particolari prodotti che non permettono il rilascio di ioni nichel a contatto con l'acqua.

LOW ENVIRONMENTAL IMPACT PRODUCTION CYCLE

Every phase of the production process is constantly monitored and undergoes continuous improvements. Specifically the chrome plating-in-galvanic bath phase is carried out according to a patented system, called PWP (Pure Water Process) - that through 2 separate treatments inhibits the release of toxic metals into the potable water: the first is for chemical elimination of lead, the second consists in a deposit of corrosion-resistant electrolytic nickel to which must be added special products that limit the release of nickel ions when coming in contact with water.

OTTONE: MATERIA PRIMA CERTIFICATA

L'ottone è una lega di rame e zinco alla quale si aggiungono altri componenti secondo le performance richieste ai prodotti. Nel caso della rubinetteria si aggiungono piombo e nichel che possono rivelarsi tossici se presenti in quantità eccessiva. L'ottone utilizzato da Gattoni Rubinetteria è di composizione chimica rispondente a standard internazionali e garantisce le migliori performance sia per incontrare il gusto estetico moderno in fase produttiva che per agire in rispetto dell'ambiente (grazie a speciali trattamenti come quello della cromatura trivalente denominato PWP - Pure Water Process).

BRASS: CERTIFIED RAW MATERIAL

Brass is an alloy of copper and zinc to which other components are added based on the performance required for the product. For the taps and fitting products nickel and lead are added, which however can be toxic if present in heavy quantity. The chemical composition of the brass used by Gattoni Rubinetteria is in compliance with international standards and guarantees the best performance both to satisfy the modern aesthetic taste during the production phase and to respect the environment (thanks to treatments such as the trivalent chroming called PWP - Pure Water Process).

CARTUCCE A RISPARMIO D'ACQUA ED ENERGIA

L'adozione di nuove tipologie di cartucce, piccolo cuore pulsante del rubinetto che ne permette la miscelazione, consente di ottimizzare i consumi e di evitare inutili sovraccarichi di energia. Gattoni Rubinetteria dispone di tre tipologie di cartucce miscelatrici che rispettano le performance richieste dai rubinetti nelle quali sono installate, e di una cartuccia termostatica. Le cartucce di Ø 25 mm sono presenti nelle serie di design ed offrono una portata d'acqua di 10 litri al minuto, ampiamente al di sotto dei 12 litri richiesti dalla normativa, mentre le cartucce di Ø 35 mm sono installate nelle collezioni più commerciali dell'azienda e rispettano lo standard di 12 litri al minuto.

WATER AND ENERGY SAVING CARTRIDGES

The adoption of a new type of cartridges, small pulsating heart of the tap that enables the mixing of the water, makes it possible to optimize consumption and avoid useless energy overloads. Gattoni Rubinetteria offers three different types of water mixing cartridges that comply with the performance required for the taps they are installed in and a thermostatic cartridge. The Ø 25 mm cartridges are installed in the design series and offer a water flow of 10 lt/min way below the capacity required by law, while the Ø 35 mm cartridges are installed in the more commercial versions and respect the standard of 12 lt/min.

AERATORS WITH FLOW REDUCERS

Modern aerators are equipped with flow limiters, small devices screwed on to the mouth of the tap, that by mixing water with air allow up to 30% water saving, while obtaining a better flow jet (same power with no spurts).

AERATORI CON RIDUTTORI DI FLUSSO

I moderni aeratori sono dotati di riduttori di flusso: si tratta di quei piccoli dispositivi avvitati all'estremità della bocca di erogazione del rubinetto che, miscelando l'acqua con l'aria, permettono di risparmiare fino al 30% di acqua ottenendo un getto migliore (stessa potenza e niente schizzi!).

COMPONENTS MADE OF NON-TOXIC MATERIALS

All soft rubber components and connectors of the taps are made of polymers, obtained from non-toxic compounds which are highly elastic and have excellent mechanical properties.

The washers and o-rings fitted inside the tap must guarantee tight-fitting between the parts and fight all degenerative phenomena caused by the warping effect generated by the pressure exercised by the rubber molecules (including resistance to the formation of fungi and mildew).

COMPONENTI IN MATERIALE ATOSSICO

Tutti i componenti e raccordi in gomma morbida dei rubinetti sono fabbricati con polimeri frutto di mescole atossiche, dotate di ottime proprietà meccaniche e di grande elasticità.

Nel caso di rondelle ed o-ring essi, all'interno del rubinetto, devono garantire tenuta fra le parti e contrastano tutti i fenomeni degenerativi dovuti all'azione distorsiva della pressione delle molecole della gomma di cui sono costituite (compresa la resistenza all'attacco di funghi e muffe).

RECYCABLE PACKAGING

For quite some time Gattoni Rubinetteria has been complying with standards that only recently have become compulsory and that require the use of sponge instead of polystyrene inside the packaging cartons to protect the tap all through the time between the shipping from our warehouse to destination. Carton is a material easily recyclable that can also be recovered for further use.

IMBALLAGGI RICICLABILI

Da tempo Gattoni Rubinetteria risponde a quelle che solo recentemente sono diventate normative che impongono la presenza di spugna e non più di polistirolo all'interno delle scatole di imballaggio per proteggere il rubinetto nel corso della sua vita dal magazzino spedizioni dell'azienda fino a destino. Il cartone è quindi materiale facilmente recuperabile e riciclabile.

NO ACOUSTIC POLLUTION

This is an aspect that characterizes the plumbing hydraulic system and not just the tap, which is only the external visible part of the installation; in fact it is actually the latter that amplifies an irritating noise, which some European countries already regulate quite strictly. That is why Gattoni Rubinetteria's series, rigorously tested in laboratory, satisfy all these requirements. Among others the French certification (NF) focuses upon both the single-lever mixers and the traditional taps imposing the use of sintered ceramic instead of brass screw downs.

NESSUN INQUINAMENTO ACUSTICO

Appannaggio di tutto l'impianto idraulico piuttosto che del solo rubinetto che ne rappresenta la parte estrema e visibile esteticamente, in realtà proprio quest'ultimo amplifica una fastidiosa rumorosità che alcune nazioni europee regolamentano in maniera restrittiva. Per questo le serie di Gattoni Rubinetteria soddisfano i requisiti richiesti da queste norme, rigorosamente testati in laboratorio. Tra le altre, la certificazione francese NF pone l'attenzione in questo ambito sia per i miscelatori monocomando che per la rubinetteria tradizionale, imponendo vitoni in ceramica sinterizzata invece di quelli in ottone.

RESPONSIBLE USE OF THE TAP

In Italy also, possibly just recently as compared with other countries of the world, a more and more growing civic awareness is contributing to produce good results in terms of a conscious behaviour towards nature and the riches it offers us. Water, a primary necessity which apparently we consider an unlimited resource, is the element we must deal with when turning on a tap or mixer. A responsible use of water contributes to improve the innovative performances already developed by the manufacturer.

UTILIZZO RESPONSABILE DEL RUBINETTO

Forse da meno tempo rispetto ad altri paesi nel mondo, anche in Italia una sempre crescente coscienza civica contribuisce a far raccogliere frutti in termini di comportamenti consapevoli verso la natura e ciò che essa ci offre. L'acqua, bene primario apparentemente inesauribile, è l'elemento con il quale ci si deve confrontare utilizzando un rubinetto ed importante è il suo utilizzo responsabile, che va ad aggiungere efficacia alle prestazioni innovative già sviluppate dal produttore.
